

Help Shape the Future Understanding of Heart Conditions – From Home

Join a national, all-remote study using wearables to help better understand heart conditions.

OCORO heart study

Shape Future Understanding of Heart Conditions

By contributing your health data, you may help researchers better understand how heart conditions behave over time - whether they are stable or changing.

Gain Personal Monthly Insights*

As part of participation, you'll receive a summary of data collected from you every month that you can choose to share with your doctor.

*The monthly summary is provided for informational and for research purposes only. It is not a diagnostic report, it does not constitute medical advice, and it is provided for retrospective review. This report is not a guide for treatment or as a replacement for your doctor's advice.

The **OCORO Heart Study** is a national, observational study designed to help researchers better understand how heart conditions behave over time - whether they are stable or changing - as well as the use of digital health tools.

Who Can Join?

Adults (18+) in the U.S. who have a cardiovascular disease, such as:

- Heart Failure (HF)
- Hypertension (HTN)
- Aortic Stenosis (AS)
- Hypertrophic Cardiomyopathy (HCM)
- Dilated Cardiomyopathy (DCM)

What You Can Expect from Study:

You Will:

- ✓ Receive a kit including devices to be used in this study – provided and shipped to you at no cost.
- ✓ Use the devices and answer periodic questionnaires in the app.
- ✓ Receive a monthly summary* every month summarizing data collected from you that you can choose to share with your doctor.

You Won't:

- ✗ Need to take any new medication.
- ✗ Have to change your current treatment plan.
- ✗ Be asked to visit a clinic or undergo medical procedures.

How It Works:

- 1 **Enroll** in the observational study
- 2 **Receive wearable and other non-invasive devices** provided and shipped to you at no cost
- 3 **Share your health data** and electronic health records
- 4 **Live your life**— the technology does the work in the background while you carry out activities of daily living
- 5 **Provide data** that helps researchers analyze trends that could shape future understanding of heart conditions

Frequently Asked Questions

1 How long does it last?

Up to 5 years, but you can stop anytime.

2 Does it cost anything?

No, devices are shipped to you at no cost.

3 Is my information private?

We work to keep your information private and safe. However, the internet is not secure and you should be mindful about sharing personal information.

4 Why should I participate?

The data you provide in this study could help shape the future understanding of heart conditions. You will also receive a monthly summary* of data collected from you that you can choose to share with your doctor.

*The monthly summary is provided for informational and for research purposes only. It is not a diagnostic report, it does not constitute medical advice, and it is provided for retrospective review. This report is not a guide for treatment or as a replacement for your doctor's advice.
